

Summary → Arrays

→ Collection of similar data type which is Continuous in memory

10	12	13	15	12	11
----	----	----	----	----	----

↓
arr

Syntax

Data type of $[]$ Name of array = new Data type $[\overset{\text{Size}}{\text{of array}}]$

$\text{int} \Rightarrow \text{int } [] \text{ arr} = \text{new int } [\overset{10}{10}]$

<u>idx</u>	0	1	2	3	4	5	6	7	8	9
	11	12	10	13	9	4	3	5	6	8
	1	2	3	4	5	6	7	8	9	10
	Position									

$\text{idx} = \text{Position} - 1$

datatype -> Prim or non Prim

String -> String[] arr = new String[10]

float -> float[] arr = new float[10]

double

long

Continuous in mem

Non Perm

int \rightarrow 4 bytes of memory

integers 10 bytes of memory

↓
0 1 2 3

$2k$ $2k+4$ $2k+8$ $2k+12$

Region

var

Stack memory

Heap memory

var

↓
var

↓

int [size] \rightarrow 4
RHS

integers of memory

Primitive
(int, float, double, long, char, boolean)

+
Reference of non Perm

Reference variable

int r >
LHS

```
// 2 → t1 = t2
```

```
System.out.println(arr[0]); // → t1 → 0(1)
```

```
System.out.println(arr[4]); // → t2 → 0(1)
```

$T_1 = T_2$

$arr[0] \rightarrow 2k \rightarrow O(1)$ ✓

$arr[i] = address(arr[0]) + i \times y \rightarrow O(1)$
 $2k + 4 \times 4 \Rightarrow 2k + 16$

Find Element In An Array

$n \rightarrow zip = 5$

0	1	2	3	4
5	2	1	10	12

$d \rightarrow zip$

- ↓
- 1). $d = \underline{10} \rightarrow \text{Present} \rightarrow 3$
- 2). $d = \underline{15} \rightarrow \text{Not Present} \rightarrow -1$

$\text{if (arr[i] == d)} \{$
 return i
}

$2 == 10 \quad \times$

$1 == 10 \quad \times$

$10 == 10 \quad \checkmark \rightarrow \text{return } 3$

```
public static void findElementInArr(int[] arr, int d) {
    for (int i = 0; i < arr.length; i++) {
        if (arr[i] == d) {
            return i;
        }
    }
    return -1;
}
```

$d = 15$

$i = 0 \rightarrow 10 == 15 \times$

$i = 1 \rightarrow 11 == 15 \times$

$i = 2 \rightarrow 15 == 15 \checkmark$

$d = 100$

$i = 0 \rightarrow 100 == 10 \times$

$i = 1 \rightarrow 100 == 11 \times$

$i = 2 \rightarrow$

$i = 3$

$i = 4$

Min_Max_Array

$$SPan = \text{Max} - \text{Min}$$

0	1	2	3	4	5
10	-2	5	-1	0	12

$$Size = 6$$

$$\begin{aligned} \text{max} &= 12 \\ \text{min} &= -2 \end{aligned}$$

$$\begin{aligned} SPan &= 12 - (-2) \\ &= 12 + 2 \\ &= 14 \end{aligned}$$

$$\begin{aligned} \rightarrow \text{Max} &= \text{Integer.MIN_VALUE} \\ \rightarrow \text{min} &= \text{Integer.MAX_VALUE} \end{aligned}$$

$\text{if} (\text{Max} < \text{arr}[i])$
 $\text{Max} = \text{arr}[i]$
 $\text{if} (\text{Min} > \text{arr}[i])$
 $\text{Min} = \text{arr}[i]$
